

## Michael Noreika Joins NMR as a Senior Project Manager

### **NMR is pleased to announce the addition of Michael Noreika.**

Michael comes to us with a background steeped in utility DSM programs and energy use in the built environment. Most recently, at Puget Sound Energy, his responsibilities as a senior analyst spanned a range of demand-side management and system load forecasting roles. As a program evaluator for PSE, Michael led impact and process evaluations for commercial, industrial, and residential programs; portfolio and program design; and measure characterization research. Additionally, he managed a multiyear research project for the Load Forecasting group to develop an end-use library to inform system load forecast models, integrated resource planning, and carbon mitigation research.

Prior to joining PSE, Michael was a consultant for Navigant (now Guidehouse), where he managed impact and process evaluations of DSM programs. Michael started in the industry nearly 15 years ago as a project engineer for a DSM implementation firm in California, where he led comprehensive energy audits and analyses for commercial facilities.

Michael holds an M.S. in Civil Engineering from the University of Washington and a B.S. in Engineering from Swarthmore College. Since 2018, Michael has been a member of the International Energy Program Evaluation Conference planning committee.
